Office Action Summary

Application No.

10/821,297

Applicant(s)

YAMAMOTO, TAKAO

Examiner

Hussein A. El-chanti

Art Unit

2157

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to application filed on April 8, 2004. Claims 1-6 are pending examination.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claim 6 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 6 recites "A computer program...to execute:". Claim 6 lacks or not limited to physical articles or objects which are structurally and functionally interconnected to the code in such a manner or to establish a statutory category of invention and enable the code to act as a computer component and realize its functionality.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by North et al., U.S. Patent No. 6,505,245 (referred to hereafter as North).

As to claim 1, North teaches a data conversion rule switching device for switching data conversion rules in accordance with a target device in order to

Art Unit: 2157

respectively control a plurality of target devices in response to operation of a plurality of controls provided outside or inside the data conversion rule switching device (see col. 5 lines 41-55, a network console device connected to a plurality of devices to be monitored and controlled), said data conversion rule switching device comprising:

a plurality of data communication ports for externally connecting with the plurality of target devices and transmitting operation data corresponding to operation of the plurality of controls and generated in response to the operation to the plurality of target devices (see col. 6 lines 26-39 and fig. 2-3 the management terminal is connected to a plurality of devices using I/O ports);

an assignor for assigning the plurality of data communication ports one by one to each of the plurality of target devices, respectively (see col. 7 lines 17-25 and col. 10 lines 37-59, each of the ports 46-1 to 46-n of the management terminal is assigned to one device 26-1 to 26-n);

a setter for setting a data conversion rule suitable for control of the target device assigned to the data communication port, for each of the plurality of data communication ports (see col. 6 lines 40-62, each of the actions monitored and received from the managed device has a series of actions as a response from the management device);

a selector for selecting a desired data communication port from among the plurality of data communication ports (see col. 6 lines 40-62, the management terminal

determines a receiver device for the data to be transmitted and selects a port accordingly);

a converter for converting operation data corresponding to operation of the plurality of controls and generated in response to the operation in accordance with the data conversion rule set for the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the event detection module determine an event response for a detected event for the managed device); and

a sender for sending the converted operation data to the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the operations are sent by the event detection module to the managed device).

As to claim 2, North teaches a data conversion rule switching device according to claim 1, further comprising a detector for detecting the data communication port selected by the selector, wherein the conversion of the operation data by the converter and the sending of the converted operation data to the data communication port by the sender are performed for all of the detected data communication port (see col. 10 lines 1-15 and col. 10 lines 37-col. 11 lines 9, each device has a log file, the management device uses the log file to determine the port connected to the device and the actions allowed on the device).

As to claim 3, North teaches a data conversion rule switching device according to claim 1, wherein the respective target devices are devices in which software is

activated, and the control in response to operation of the plurality of controls is control on operation of the software (see col. 10 lines 37-col. 11 lines 9).

As to claim 4, North teaches a data conversion rule switching device according to claim 1, wherein the respective target devices can be connected to the data conversion rule switching device via a physically single cable, and the converted operation data is transmitted to the respective target devices via the cable (see fig. 2-3, each device 26-1 to 26-n is connected through port 46-1 to 46-n).

As to claim 5, North teaches a method of switching between a plurality of data conversion rules in accordance with a target device in order to respectively control a plurality of target devices in response to operation of a plurality of controls (see abstract), said method comprising:

a step of externally connecting the respective target devices to a switching device and assigning a plurality of data communication ports one by one to the respective target devices for transmitting operation data corresponding to operation of the plurality of controls and generated in response to the operation to the plurality of the target devices (see col. 6 lines 26-39 and fig. 2-3 the management terminal is connected to a plurality of devices using I/O ports);

a step of setting a data conversion rule suitable for control of the target device assigned to the data communication port, for each of the plurality of data communication ports; a step of selecting a desired data communication port from among the plurality of data communication ports (see col. 6 lines 40-62, each of the

actions monitored and received from the managed device has a series of actions as a response from the management device);

a step of converting operation data corresponding to operation of the plurality of controls and generated in response to the operation in accordance with the data conversion rule set for the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the event detection module determine an event response for a detected event for the managed device); and

a step of sending the converted operation data to the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the operations are sent by the event detection module to the managed device).

As to claim 6, North teaches a computer program containing program instructions executable by a computer and causing said computer to execute:

a process of assigning a plurality of data communication ports to which target devices are externally connected, to respective target devices one by one for transmitting operation data corresponding to operation of the plurality of controls and generated in response to the operation to the target devices (see col. 6 lines 26-39 and fig. 2-3 the management terminal is connected to a plurality of devices using I/O ports);

a process of setting a data conversion rule suitable for control of the target device assigned to the data communication port, for each of the plurality of data communication ports; a process of selecting a desired data communication port from among the plurality of data communication ports (see col. 6 lines 40-62, each of the

actions monitored and received from the managed device has a series of actions as a response from the management device);

a process of converting operation data corresponding to operation of the plurality of controls and generated in response to the operation in accordance with the data conversion rule set for the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the event detection module determine an event response for a detected event for the managed device); and

a process of sending the converted operation data to the selected data communication port (see col. 9 lines 55-col. 10 lines 11, the operations are sent by the event detection module to the managed device)..

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein A. El-chanti whose telephone number is (571)272-3999. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571)272-4001. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
